Selected projects

Individual projects created on the ArtTECH programme at NUST MISIS.

Regular Room — 2026 **Presentation**

A 3D game prototype in which the player adapts to the altered functions of household objects. When the objects return to their conventional roles in the finale, the player experiences a cognitive conflict. This experience offers a way to observe how expectations form.

A Work about the Sun, Cancer, People and Meanings — 2026 **Presentation** / **Video**

An interactive prototype with a solar panel whose illumination controls the readability of a text. This mechanism explores the effects of solar radiation on the human body.

Learned Helplessness — 2026 **Presentation**

An interactive web project about expectations of AI and trust in a conversational interface. The language model deliberately avoids answering the user's requests.

Character Construction Kit — 2026 **Presentation** / **Video**

An interactive object for assembling Chinese characters from individual components. The work explores how the ability to act within an unfamiliar system of signs changes its perception.

Fragmentary Perception — 2025 **Presentation** / **Video**

A musical composition based on wordplay, in which the interpretation of what is heard depends on context and the listener's prior experience.

Education

2025–present. NUST MISIS. Master's programme, ArtTECH.

2025. Kemerovo State University. Bachelor's degree with honours in Linguistics, specialising in Theory and Practice of Intercultural Communication.

2025. Kemerovo State University. Professional retraining programme, Website Creation with HTML and CSS. Qualification: Web and Multimedia Application Developer.

Tools and skills

3D modelling in Blender and Rhino, refining models and preparing files for production.

Laser cutting and soldering electronic components.

Basic proficiency in TouchDesigner.
